

# Tercum LLC

*Maritime Technologies Brochure*

**Helping protect and preserve our planet's maritime beauty.**

## About Us

---

Named in honor of the father of our founder, Tercum LLC brings that respect and care to every project they are tasked with managing.

## Services

---

Focused on Management Services, Tercum LLC offers services that take a client's project from conception to completion. This service combines consultancy with program management and often makes use of the services of numerous suppliers and system integrators to offer a turn-key project.

## Do you need to monitor marine habitats?

### Here are a couple of ideas...

With the effects of climate change, poaching, pollution and other unnatural occurrences, have put the lives of our aquatic companions in danger. Some of their numbers have also been greatly decreased. Our products and services would allow you to:

- ⚓ Better visualize aquatic habitats
- ⚓ Properly assess stock of marine life
- ⚓ Analyze changing marine conditions
- ⚓ Track the migration patterns of aquatic life

## Can't keep track of pollution or get enough evidence to prosecute those responsible?

**Think again!** Our solutions can give you the ability to detect even minute traces of pollution in real-time and as such, catch those responsible in the act or even record them doing the deed.

### Our products can detect:

- ⚠ Hydrocarbons
- ⚠ Fecal Matter
- ⚠ Radioactive waste, etc.

*We make use of over a century of experience together with cutting edge technology to offer future proof solutions.*

## Vessels lost at sea? Coast Guard out of radio range?

**No problem!** We can extend your communications networks further out into your maritime domain.

## Persistent eyes-on.

With all this technology at our disposal, we have not left out our military and policing clients.

### **Need to expand your surveillance capabilities?**

We are all being asked to do more with less, but faster. We have taken these factors into account as well to add features for force multiplication and force protection.

## System Features

In summary, our systems can offer the following features:

Digital fencing with breach detection and object tracking in real-time

Surface and subsurface detection

Multi-object tracking and intelligent surveillance

Communications Expansion

Easy integration into NOC to enhance common operational picture

**With our solutions you are only limited in three ways; by your imagination, maritime borders and budget.**
